Despite its ordinary and standard exterior, this card comes overclocked with a very competitive core clock of 729MHz and a memory frequency of 2214MHz DDR. The included accessories are more than adequate but the lack of any applications or games makes it a very lean package that may appeal to some consumers. Or it could turn some off some prospective buyers looking for a more wholesome package. The XXX Edition is not too be sneered at since the core is at 730MHz and suitably complemented by memory operating at 2260MHz DDR. It is fast and XFX knows it, since it has paired the card with a popular and fairly recent first person shooter like Ghost Recon Advanced Warfighter, the better to showcase the cards graphical prowess. The other accessories in the package are also useful though it does seem to lack the Component cable dongle commonly bundled with graphics cards.

There are no surprises when it came to the included accessories and the single SpellForce 2 game should provide some entertainment for users. You can reach out to them here. Besides the addition of the ECS decal, we could hardly distinguish it from the many generic looking GeForce 8600 GTS in the market. The clock speeds too are ordinary at the default 675MHz core and 2000MHz DDR memory. Though we didn't receive the full retail version for this review, at the time of publishing, we still weren't able to ascertain from ECS the exact bundle with the card.
