Auto Power Off Automatically turns off the printer when no print data is sent for a certain interval.If the power plug is removed from the wall outlet with the POWER lamp still lit or flashing green, the printer may become unable to print. Note At purchase, the printer is set to feed from the Rear Tray. If you are printing without changing paper source settings, load paper in the Rear Tray. Refer to the instruction manual supplied with the paper for detailed information on the printable side and notes on handling paper. For information on the paper sizes available for each Canon genuine paper, visit our website. Here are some hints for handling these paper sources according to how you are using them. You can print more efficiently by specifying the type of paper you use regularly this way, since the paper source will be switched automatically to the Cassette for this paper. For example, if you intend to install the printer in a small place, such as on a shelf with minimal space, you can use just the Cassette for printing. When printing on both sides, we recommend Canon's Super White Paper DoubleSided.Note For details on printer driver settings, see "Printing with Windows" on page 22 or "Printing with Macintosh" on page 23. Before Using the Printer. See "Flatten the four corners of the paper before loading it." on page 12. Pull out the Cassette from the printer. Remove the Cover on the Cassette. Adjust the size of the Cassette. Insert the Cassette into the printer. Push the Cassette all the way into the printer. If the Cassette has been extended to accommodate larger paper sizes, the front edge of the Cassette will extend beyond the front of the printer. You can also select the paper source with the printer driver.http://paseygol.com/userfiles/ibm-sametime-manual.xml

JerryRoger Hicks 5.0 out of 5 stars It has a large pigment ink cart for printing text documents; also a 4color dye ink set, ie, photo black, yellow, cyan, and magenta. But you cant buy this one new any more. Did I mention you can buy ink for the carts for almost nothing. Other features, Top tray and cassette tray. The top tray is great for printing one or two labels, or alternate paper, like 3hole punched. Classic shiny black exterior is very impressive. I believe Canon installed kill software in these printers to make them die because while printing merrily along they they just stop running. True!Im on my 3rd 4500 but the first one I accidentally killed with a can of compressed air and a houseful of pets. Not a big fan of compressed air anywhere NEAR a printer. Or pet hair. However I used both of my previous 4500s to print 1,000 mailers for a local veterinary practice, BOTH SIDES and did them all without a single paper jam. Thats right. These printers printed 2,000 continuous pages EACH. The printers never failed and not one single paper jam.

Fact is I dont recall ever having a paper jam on an IP4500 printer. Any of em. Ever. Love their sheet feeding system. My opinion of the Pixma IP4500 is this the IP4500 is the most reliable printer I have ever owned or ever want to own.I see myself most likely always owning a Canon printer. The IP4500 will always be the first one I look for.Overall, this is an excellent printer. However, one does not need to use both trays at least not at all times, so it is possible to reconfigure it so that it can fit better into limited space. Having two trays is handy, since it makes it easier to switch between paper of difference sizes or qualities. Setting up the printer is fairly straightforward, though somewhat timeconsuming, in part because it spends about 12 minutes calibrating itself as part of the setup. The instructions are ok, but the accompanying informational book is only fair. Some aspects of the printer use are not addressed, so one has to make educated guesses to have the printer do certain things. Once operational, the printer is fast, capable of twosided output, and produces high quality printing. Text on plain paper is very good, though on close inspection one can see a little bleeding of

the ink. Its about as good as any nonlaser text Ive seen, be it HP, Canon, or Epson. Photographs are spectacular, with brilliant colors, and very high resolution. Overall, this is an excellent choice if you are looking for a good general purpose printer, capable of producing fine text and photographs at high speed.I have never used it for photo printing, so I cannot comment on this capability. Give my past experience with small inkjet printers they all seem to fail after two or three years I have come to consider them disposable. Given the way I use my printer, I choose the printer brand based on whether it supports generic print cartridges. I cant put my hands on my original receipt, but I know that I have had my Pixma iP4500 for several years now. It still works like new.

It also accepts generic print cartridges without complaint or fuss. In short, it does exactly what I need from a printer, it was economical to buy, it has lasted longer than any of my earlier printers, and it is economical to operate. For me this is perfect.Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. The iP4500 is a step up from the recently reviewed iP3500; it offers faster print speed, slightly better print quality, and more features, including an auto duplexer.Canon recommends putting stiffer media such as photo paper in the rear input, as paper in the cassette is forced to bend around a roller. Both inputs have adjustable paper guides, so both can handle a wide range of paper sizes. A panel in the front of the printer folds out to serve as the output tray.
